

APPLE SHREDDER

Ideal machine for shredding apples standardizing the sizes of pellets suitable for crushing with pneumatic presses. The mechanical force with a proper machine speed allows you to shred even small components plant (carrot roots etc.) to prepare them for pressing. The reception takes place by gravity from specific belt feeder or auger.

Constructed entirely of stainless steel AISI 304, it has a roller with movable knives with specific shape. Combined with a crushing unit specially designed, it uses the homogeneity and increases the extraction yield during loading of the presses.

This grinding system has been taken as an example by many winemakers and producers of cider in the region of Asturias and the Basque Country, leading natural cider producers.
